

## APRA in Nigeria

### The case of medium-scale farmers (Work Stream 1)

APRA is working in Nigeria to: document the pace at which farm size distributions are changing in Nigeria, with particular focus on the rise of medium-scale farmers and their influence on agricultural commercialisation; assess the causes and consequences of changing farm size distributions in Nigeria; characterise the potentially diverse pathways through which individuals become commercialised medium-scale farmers; explore whether medium-scale farmers are making small-scale farmers more productive and commercialised; and examine the differing outcomes of various agricultural commercialisation pathways.

### Cocoa commercialisation (Work Stream 2)

APRA is working to: examine how the economy and livelihoods have changed in relation to cocoa; determine if there has been a movement towards greater intensification on smaller land areas; assess the impact of cocoa cultivation on food crop cultivation; and explore the role of technology in cocoa commercialisation.

All APRA Nigeria publications can be found on the dedicated country page:
